NON-PRIORITY PROJECT WATER QUALITY CHECKLIST

Complete this checklist by indicating in the box next to each requirement: "YES" if implemented, "INF" if infeasible, or "N/A" if not applicable and provide brief explanation for each. Refer to Section 3 of the Technical Guidance Document (TGD), for more information on these requirements & how to implement them: <https://cityoflagunaniquel.org/1162/New-Development-Stormwater-Requirements>

GENERAL REQUIREMENTS

	Stormwater BMPs* are implemented onsite, close to pollution sources.
	Stormwater BMPs* are designed and implemented with measures to avoid vector issues. (e.g., mosquitos, rodents, etc.)

SOURCE CONTROL BMP REQUIREMENTS

	Systems are in place to prevent water runoff (other than rainwater) to the storm drain system.
	Stenciling or signage is in place on property storm drains.
	Outdoor material storage areas protect from rainfall, run-on, runoff, and wind dispersal.
	Trash storage areas are protected from rainfall, run-on, runoff, and wind.

LOW IMPACT DEVELOPMENT (LID) BMP REQUIREMENTS

	Natural storage reservoirs and drainage corridors are maintained or restored.
	Buffer zones are in place for natural water bodies.
	Natural areas are conserved (including existing trees, vegetation and soils).
	Impervious surfaces are disconnected through distributed pervious areas.
	Landscape and impervious surface areas are designed to effectively receive and infiltrate, retain and/or treat water runoff from impervious areas.
	Small water collection strategies are in place that are in close proximity to the place where runoff would impact the ground.
	Permeable materials are used for low traffic areas and appropriate soil conditions.
	Native or drought tolerant landscaping is used.
	Rainwater harvesting and use strategies are incorporated in the project.
